Grasp strap handle from low pulley. 3. Exercise.		<b>TORSO ROTATION</b> 1. Adjust pulley. 2. Grasp strap handle. 3. Exercise.	

ABS

**TRAINING TIPS**

**TO INCREASE MUSCLE SIZE:**

- Do 8-10 repetitions of each exercise
- Increase weight after each set, provided you maintain proper body form and technique
- Complete 3-4 sets of each exercise
- Rest for 45-60 seconds between sets

**TO INCREASE ENDURANCE OR TONE:**

- Do 12-15 repetitions of each exercise
- Complete 3-4 sets of each exercise
- Rest for 45-60 seconds between sets
- Limit rest between exercises to build cardiovascular endurance
- Ideally, you should perform 30 seconds of cardiovascular exercise between each strength training exercise

**SAMPLE PROGRAMS:**

- Weekly routine—1 body area per day:
  - Monday and Wednesday: Upper Body
  - Tuesday and Thursday: Lower Body
  - Friday: Rest
  - Alternate days for Abdominals
  - Never work the same muscle group on consecutive days
- Three day routine—3 days on, 1 day off:
  - Day 1: Chest, Arms and Abdominals
  - Day 2: Shoulders & Back
  - Day 3: Legs and Abdominals
  - Day 4: Rest
  - Never work the same muscle group on consecutive days

**EXERCISE SAFETY**

- Consult a physician before you begin an exercise program.
- Always warm up before your workout with 5-10 minutes of cardiovascular exercise. Then stretch slowly, exhaling as you gently stretch each muscle. Without bouncing, hold each stretch for at least 10 to 30 seconds. Following your strength training regimen, stretch again to complete your workout.
- Maintain proper spinal alignment and head positioning throughout your workout.
- For maximum results, follow a complete fitness program that includes proper nutrition, aerobic exercise and strength training.
- Your body will respond to weight training and conditioning only when you complete your workout on a regular basis. Your new V6 HOIST® Fitness System will help you reach your goals only with consistent use.
- To gain the most benefit out of your workout, it is necessary to use muscles that complement each other. When using a particular muscle, you should use the supporting muscles as well.
- Do not attempt to lift more weight than you can comfortably handle. Avoid the risk of injury by remaining within your limits.
- Do not hold your breath. Exhale during the pressing action, and inhale upon returning to the start position.

**EQUIPMENT SAFETY**

- Make sure that you read and understand your Owner's Manual and all warning labels and decals on your machine. Please use all precautionary measures necessary for safety.
- Keep observers, especially children, at a safe distance from the equipment while in operation. Do not allow children to play on the machine at any time.
- Carefully inspect your machine before each use. You must inspect the cables, nuts, bolts and belts on a daily basis. Replace or repair any frayed, loose or otherwise damaged parts at the first sign of a problem.
- Always stay clear of all weights and moving parts. Obtain assistance to free any jammed parts. Never attempt to free a jammed part by yourself.
- Sweat is corrosive—make sure to wipe down the machines on a regular basis with a watered down rag. Then, dry completely to avoid rust.
- Maintain a regular routine of preventative maintenance.

For additional information on fitness health, safety, or equipment, call HOIST® Fitness Systems at 800.548.5438 or visit us online at [www.hoistfitness.com](http://www.hoistfitness.com). For additional exercises and instructions, please refer to the "Exercise Descriptions" section of your Owner's Manual.
